

Getting the Most from Your Insurance Policies

At All Dry USA, our goal is to provide all your remediation and restoration services for your home and office properties. One way we do this is by performing direct insurance billing.

Here are some things to know about water damage, mold damage, and fire & smoke damage claims.

Water Damage Claims

Water can be sudden and devastating and should be addressed immediately to prevent further damages to your property. Your insurance requires you to react to these situations in a prompt manner and having a response team address the problem straight away will assist you in getting your claim on the right track.

Mold Damage Claims

Insurance coverages for mold can be tricky and require special understanding of the claims process. We have the expertise required to determine your coverage and get your property back to pre-loss conditions as soon and as safely as possible.

Fire & Smoke Claims

When you experience a fire in your home or office, the faster your reaction time the more property you can rescue. Starting right away is crucial and a claim can cover your repairs, assist with temporary housing, property cleaning, removing the damage from putting the fire out, and of course eliminating the odors left behind.

About All Dry USA

When disaster strikes your home or business, you must act quickly to halt the damage and make the needed fixes. But with so many remediation choices, it helps to know a local specialist, with expertise, that's available 24/7.

Restoring Fire-Damaged Property

Most fires result from cooking or grease fires that get out of hand and overwhelm home chefs. Cigarettes, electrical shorts, lightning, and arson are other common causes of residential fires. After a property owner makes certain that everyone is safe, he should turn his attention to structural and content damage.

Even after the fire has been put out, the threat to your belongings remains due to the acidic nature of smoke. Materials respond differently to fire, heat, and smoke and it takes a trained professional to determine the steps needed to minimize further damage and maximize the amount of salvageable property.

How All Dry USA Can Help

When it comes to fire restoration projects, our goal at All Dry USA is to always return the property and contents to their pre-fire conditions. Thanks to specialized training and equipment, our experienced professionals can get you back in your home before you know it.

Removing Mold from Your Home and Office

Mold generally appears about a day or two after there has been some type of water damage.

Mold produces allergens that may cause mild to serious allergic reactions in people who are exposed to it on a regular basis. Common symptoms include skin irritation, sneezing, watery eyes, and severe respiratory problems.

How All Dry USA Can Help

Mold removal is more than simply removing ceiling, wall, and floor discoloration. Our professionals ensure you and your family's safety through proper remediation practices including: containments, air filtration, source removal, sanitizing, and disinfecting the affected areas.

If any member of your household experiences these symptoms and your abode has noticeable water damage, discoloration, or a musty smell then contact All Dry USA today.

Fixing Water Damage

If your home has been harmed by water damage, time becomes critical. Mold growth can occur in as little as 24 hours, which will make emergency restoration services more extensive and expensive. It may also force you to move out of your home, since mold can cause a wide range of respiratory problems in allergic individuals.

If water has made its way into your home, it must be removed as soon as possible. Not only will water increase the risk of mold colonies, it will also damage structures, furniture, rugs, and personal belongings.

How All Dry USA Can Help

Our talented team of technicians will arrive on your doorsteps shortly after we receive your call for water damage restoration in your home.

All Dry USA uses state-of-the-art equipment to remove moisture and water from your home. With a combination of fans and dehumidifiers, it may be possible to return any room to its pre-damaged state.
